UNIVERSITY OF BOTSWANA

DEPARTMENT OF COMPUTER SCIENCE

COURSE NO: CSI315

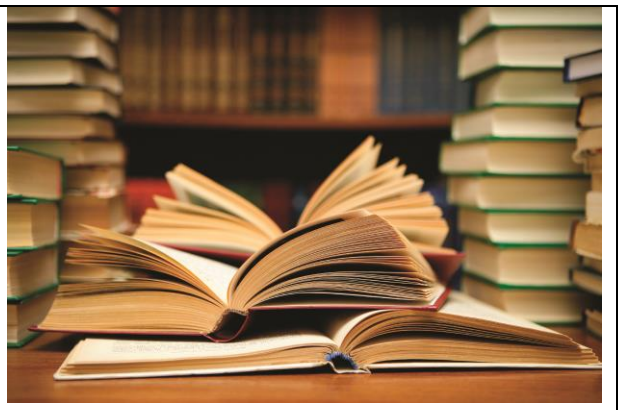

LAB 2: INTRODUCTION TO CCS. (Continuation from Lab 1)

1. Using HTML Create a table as depicted below. In addition, make the following changes:
   a) Use the col and colgroup elements to colour the first two column in red and the third column in yellow.

BOOKS		
ISBN	**Title**	**Price**
3476896	My first HTML	P53
5869207	My first CSS	P49

   b) Add a fourth column that spans the four rows. Inside the fourth column, insert an image of your choice.

BOOKS			
ISBN	**Title**	**Price**	
3476896	My first HTML	P53	

5869207	My first CSS	P49	

c) Insert a hyperlink for each book title.
d) Add a fifth row that spans the four columns. Inside the fifth row, create a complex nested list. You can use examples in your lecture slides.

2. Use external style:
   a. Set alternate table row color using CSS. Use :nth-child(even) selector child element, property background-color and value Light green
   b. Change the spacing between the cells and specify table borders using the padding and border properties respectively.
   c. Align the contents of the table in the center using text-align property
   d. Use the CSS pseudo classes :link and :visited to style visited and unvisited links differently.

3. Using embedded style sheet, format the table so it spans the entire screen using the width property.
4. Using internal style sheet format the table header so that its background color is set to coral.
